SURPLUS WAR PROPERTY

ITEMS OF INTEREST TO REA BORROWERS

Speedy Action Essential.. IF YOU DESIRE THESE MATERIALS

August 23, 1946

MATERIAL: Trailer Mounted Generator units. (See diagram on reverse side.)

CONDITION: Excellent - Operating hours 6 to 200.

PRICE: \$1,500.00 to \$2,000 depending on hours use.

QUANTITY AVAILABLE: 200

TIME LIMIT: Orders must be received in this office not later than September 5.

ORDER INSTRUCTIONS: If orders are wired in they must be confirmed by a purchase order in duplicate, marked "Confirmation of telegraph order". Plant procurement work order must also accompany purchase order.

These units consist of an Army K-34, 4 wheel pull type enclosed trailer, steel construction with side and rear doors; containing a 25KVA, one phase, 60 cycle, 110 volt generator directly connected to Le Roi gasoline engine.

The trailers are of sufficient capacity to mount 2-60 KW skid mounted units or 1-100 KW skid mounted units, and will be valuable to cooperatives recently purchasing units of this type through Surplus Property. The cost of the trailer and the 25KVA unit is less than the normal cost of a trailer only. The 25KVA unit can be removed to make installation of other units possible.

We feel that only cooperatives having 500 miles or more of lines, or having isolated sections to be served, should purchase these units.

We have no desire to induce the cooperatives to purchase these units, but feel you should decide to what extent these units will be of value to your cooperatives. Some cooperatives which have obtained similar units have found them.

(See other side)

In all communications to REA concerning these items, please refer to SWP Release: 170

August 23, 1946

valuable for; (1) rephasing existing lines; (2) providing emergency service for single phase sections where interruptions have been caused by storm damages; (3) providing emergency service to hatcheries and other large power users requiring 24 hour service; (4) testing out lines, transformers, etc., under construction prior to applying primary voltage; (5) temporarily energizing new single phase sections built to prevent spilt line activities, and where, due to shortage of materials etc., connections to main systems will be seriously delayed.
